

Previous HY144-D-SRC Firmware

version information

V4.2.1.1_3.1.0

Now supports the SMPTE mode* of Dante Domain Manager (DDM) (ST2110 clocking).

The word clock and preferred leader cannot be changed during DDM enrollment.

* In DDM SMPTE mode, the domain is configured for SMPTE ST2110 clocking, providing audio interoperability between Dante and non-Dante ST2110-30 devices.

V4.0.12.1_2.0.8

Fixed a problem in which sounds from Dante devices in a network might be temporarily interrupted during operation with HY144-D-SRC that was set to Redundant mode, Preferred Master ON, and Enable Sync to External ON if the primary port was disconnected and then connected again.

V4.0.11.1_2.0.8

Fixed a problem in which infrequently the card was activated when the device was turned on.

V4.0.10.2_2.0.8

Initial release
